

28 SEP 1976

NOTE FOR: Deputy Director of Logistics
Director of Logistics

FROM :
Executive Officer, OL

Hal, Jim

1. Please see my two attached notes and the covering memo from CRS on the ADSTAR program. I don't believe either of you will want to spend the time reading the Systems Requirement study or the Management Plan. Briefly summarizing, it is a proposal to update document input and retrieval into the CRS Library. The method of doing so is unspecified, although "off the shelf" equipment is the target. There are a variety of ways the requirements could be met, but certainly the result will be some mixture of electronics and micro-graphics.

2. There is an extremely optimistic FY 1977 and 1978 target date which does not appear realistic inasmuch as the system is undefined. The system has the potential, however, to be huge, particularly inasmuch as it would become an integral part of the overall SAFE program. As I read SAFE, the input/output devices to be provided in that program would also serve as output devices for ADSTAR. In any event, at this point in time it would seem that someone from 's shop is the logical focal point to participate in systems definition and implementation timing.
